

H25-M1E Specification Sheet

SHEET # 940-2T740

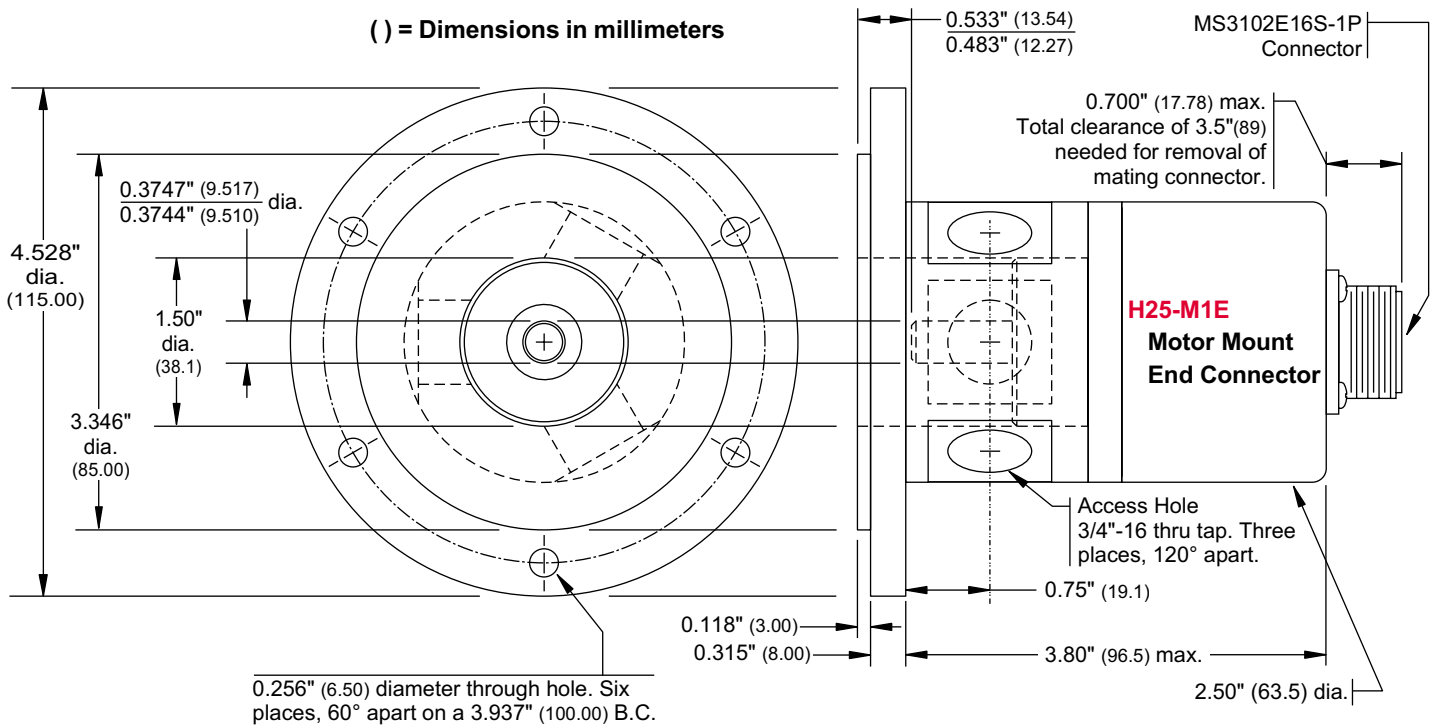

DESCRIPTION

The H25-M1E is an AMCI size 25, single turn transducer with an end connector. Its mounting flange allows it to be directly mounted to various motors for position and velocity feedback. Its IP 67 rating means it will survive most industrial applications including washdowns. Because this transducer is a resolver instead of an optical encoder, it can be used in harsh applications where an optical encoder cannot even be considered.

The H25-M1E ships with a helical shaft coupler which allows you to couple the transducer to a 3/8" motor shaft. The unit also ships with three plugs in the access holes shown in the dimensional drawing below.

Because the H25-M1E is an absolute sensor, it cannot "lose counts" as an incremental transducer can. If the H25-M1E appears to be losing counts when operating, the usual cause is a shaft slipping in a loose coupler.
